BLAKE HARMS

SENIOR SOFTWARE ENGINEER & AI ENTHUSIAST

blake@harms.haus | (713) 702-9498 | Katy, Texas
blake-harms-7263bb118 | github.com/harms-haus | harms-haus.github.io/resume

Core Languages:	TypeScript, C#, JavaScript, Python, SQL, Bash/Zsh
Frontend:	Angular, HTML5/CSS3, WPF, React, SASS
Backend:	Node.js, REST API, Vector DB, Microservices, Redis
AI Systems:	RAG Architect, Prompt Eng, Cursor, LangChain, Copilot, Local LLMs
DevOps:	Docker, CI/CD, Git, Azure DevOps, Linux Admin
Architecture:	UX Design, Home Auto, Tech Lead, Agile

// PROFESSIONAL SUMMARY

Full-stack software engineer with 8+ years experience (Emerson, Wood), specializing in high-performance C# simulations, Angular-based web platforms, and resilient DevOps infrastructure. Successfully led a 4-year initiative to modernize mission-critical desktop systems into cloud-ready Angular environments, reducing technical debt by 60%. Expert in architecting integration layers, implementing automated testing cultures, and driving safe AI/Copilot adoption within engineering workflows.

// EXPERIENCE

Senior Software Engineer

APR 2017 – PRESENT

Emerson

- **Framework Modernization:** Architected the transition of a legacy C# WPF desktop framework into an Angular/TypeScript web platform, achieving near-perfect feature parity over a 4-year solo project.
- **Strategic Tech Debt Resolution:** Refactored massive legacy codebases to resolve ~60% of technical debt; introduced domain-driven architecture and rigorous testing (Vitest/Jest).
- **Engineering Leadership:** Oversaw a modernization squad; developed reusable integration and design systems leveraging Angular, TypeScript, and modern CSS frameworks.
- **DevOps Modernization:** Led full SVN-to-Git migration across complex monorepos; implemented Docker-based containerization and automated Azure CI/CD pipelines.
- **AI Integration & Governance:** Established best practices for GitHub Copilot usage via custom tooling and training. Championed modern PR review workflows.
- **Systems Performance:** Developed high-throughput C# simulation engines for industrial engineering; iterated on UX via deep user research.

Software Engineer

MAY 2012 – APR 2017

Wood

- **Industrial Software Design:** Built WPF MVVM applications for specialized Oil & Gas fluid dynamics simulation tooling.
- **Operational Efficiency:** Streamlined complex engineering configurations through intuitive UI workflows, drastically reducing time-to-result for simulation runs.

// AI & SYSTEMS EXPLORATION

Jester

LLM FRAMEWORK

Advanced context-steered storytelling framework built on hybrid GraphRAG. Maintains 40+ interconnected narratives with high consistency using 10,000 lines of custom markdown. Context is selectively included based on the current stage of the story generation. Zero code.

GraphRAG · Context Selection · LLM Multi-Agent System

Bernard

SMART ASSISTANT

Privacy-first family voice assistant utilizing LangChain and RAG. Integrates with Home Assistant APIs to provide kid-friendly, voice-controlled automations. Managed with a custom dashboard built on React. Uses ESPHome devices for voice ingress and media playback.

LangChain · Home Assistant · Voice Recognition · Local LLM

Memoriae

KNOWLEDGE ENGINE

Intelligent personal knowledge base with automated semantic tagging and organization via LLM. High-performance Redis-backed architecture for instant retrieval. Uses BullMQ for background processing.

Redis · Semantic Tagging · Node.js · LLM Enrichment · BullMQ

// EDUCATION

B.S. Computer Science

University of Houston

Graduated 2012

Minor in Mathematics
